

Nicolas Emanuel Buggedo

Full Stack Developer

nicolas@bugedo.dev · Córdoba, Argentina · bugedo.dev · github.com/Buggedo · linkedin.com/in/nicobugedo
Available to start full-time immediately. Remote only.

PROFILE

Full stack developer with a year and a half of professional experience. I came from electrical and solar work and taught myself to program: three months in I had my first paying client, six months in a contract with a US company. I currently maintain three systems in production: a booking system for 3 courts handling over 50 reservations per week, online ordering for a multi-location food brand, and a platform that processed RSVPs and payments for more than 1,500 guests. At Ewents I built an internal CRM that cut roughly 80% of the team's manual spreadsheet work.

EXPERIENCE

Full Stack Developer · Own studio, direct clients

May 2025 - Present · Remote

- Abdonur: ordering platform for a multi-location Middle Eastern food brand. Dynamic catalog, per-branch routing and WhatsApp checkout. Live in production.
- Mundo Padel Club: booking system for 3 courts with over 50 confirmed reservations per week. Full authentication, email confirmations and bar consumption tracking.
- Invitation and guest management platform that processed RSVPs and payments for more than 1,500 people, with real-time pricing managed by the client.
- I own the full delivery cycle with the client: discovery, scope, development, deployment and follow-up. I use AI tooling day to day (Claude Code, Cursor, Copilot) to ship faster.

Full Stack Engineer (Contract) · Ewents

Aug 2025 - Mar 2026 · US, remote

- Built an internal CRM from scratch (Hono on Cloudflare Workers, Supabase/PostgreSQL, Angular 18) with automated invoicing, commission calculation and timesheet approval. Cut roughly 80% of the team's manual spreadsheet work.
- Built an edge microservices backend with sub-50ms global response times and zero-downtime CI/CD deployments.
- Daily coordination in English with a distributed team and non-technical stakeholders.

Electrician & Solar Technician · Self-employed

2017 - 2024 · Argentina

- Installed and troubleshot electrical and solar systems on site, under tight deadlines and real safety risk.

HOW I WORK

- Self-taught. I learned on real projects, with real clients and real deadlines, no bootcamp and no mentor.
- To bring down a client's monthly infrastructure cost, I learned to run self-hosted Supabase on Ubuntu at Hetzner.
- Comfortable owning a feature end to end or plugging into an existing team's stack. I work in Spanish and English.

STACK

Front React · Next.js · TypeScript · Angular 18

Back Node.js · Hono (Cloudflare Workers) · Express · REST · Prisma

Data PostgreSQL · Supabase · MongoDB

Infra Docker · Hetzner (Ubuntu, self-hosted Supabase) · Vercel · Railway · CI/CD · Git

EDUCATION & LANGUAGES

Information Systems Engineering (3 years completed) · UTN FRC, Córdoba

2013 - 2016

Full Stack Curriculum · The Odin Project and freeCodeCamp

2024 - 2025

Spanish native · English advanced (C1) · Italian intermediate (B1)
